Early Head Start Center-Based Child Outcomes 2023-2024

Tracking children's growth and development is vital for offering personalized educational support, identifying any possible developmental delays, and ensuring that children are learning skills that align with their age-related developmental milestones.

The accompanying graph visually represents the percentage of children in the center-based program, from birth to three years of age, who have achieved the skill sets that are considered developmentally appropriate for their respective ages. This information is essential for understanding how children are progressing in their early years.

Time 1 – Baseline assessment data within the first six weeks of the new program year.

Time 2 – Refers to the mid-point of the program year data.

Time 3 – Refers to the end of the program year data.
